

Lockt™ SecureAccess Access Control Designed For Switch™ Tech

Lockt™ SecureAccess is the only Physical Access Control System designed specifically for Switch™ Tech. Lockt™ SecureAccess provides all of the standard features you would expect from an Access Control System. Lockt™ SecureAccess is easy to use, easy to deploy, and powerful enough to handle your Switch™ Tech focused security needs.

Seamlessly Integrated

Lockt™ SecureAccess is built directly into the Switch™ Tech ecosystem. By default, the Switch™ Tech bridge does not come pre-installed with Lockt™ SecureAccess. However, when enabled in Switch™ Deck*, the bridge downloads and installs Lockt™ SecureAccess. Once installed, the software runs as a module directly on the bridge itself. Because of this, there is no additional hardware needed to deploy Lockt™ SecureAccess.

Emphasis on Security

Lockt™ SecureAccess ensures that your data is safe and secure. The Switch™ Tech Bridge is hardened to prevent direct access and only communicates as needed over pre-defined ports. All direct access (USB, Keyboard, Mouse, etc) has been disabled at the hardware level.

Lockt™ SecureAccess also ensures all external communications are encrypted. All browser communications to Lockt™ SecureAccess are secured via HTTPS. All communications to Switch™ Deck are secured via TLS.

Lockt™ SecureAccess can automatically backup your data both internally and to an external SMB compatible source. All backups are encrypted, so your data is secure.

Big Features in a Small Package

Lockt™ SecureAccess provides you with all the tools you would expect from an Access Control System. Just because Lockt™ SecureAccess comes in a small package, doesn't mean it isn't full of big features. Standard features include:

- **User Management**
- **Credential Management**
- **Access Level Management**
- **Schedules and Holidays**
- **Event Monitor**
- **Reporting**

Multiple Deployment Options

Lockt™ SecureAccess can be deployed in multiple ways, depending on what suits your specific circumstances and requirements.

On Premise

Simply plug your Switch™ Tech bridge into your local network. Claim your Bridge via Switch Deck. From there, you can assign it a static IP address. You then have the freedom to self-manage your Bridge and Lockt™ SecureAccess as you deem necessary.

Partner Hosted / Managed

If you don't want to manage your own Bridge, you can have your partner host and manage it for you**. Hosted Bridges offer the same functionality as On-Premise*** bridges, but are placed in a secure, off-site location and managed by your integration partner.

Partner Managed Services May Include:

- Automation of Backups
- Integrated SSL Certificates
- Patch / Firmware management

** Lockt™ SecureAccess can only be enabled by requesting activation from Lockt, LLC.*

*** Hosted services may vary depending on your integration partner.*

**** Hosted Bridges do not have direct access to your network resources and therefore are not able to take advantage of future enhancements that may connect to those resources.*
